

Mercurius Anglicanus,
OR THE
English Mercury:

Being a Double

EPHEMERIS

For the Year of our Lord, 1691.

heliocentrical & Geocentrical,

Or the Planets places and Aspects referred both to the
Sun and Earth; exactly calculated from

ASTRONOMIA CAROLINA,

For the *Meridian* of the famous City of *London*, whose
Latitude is $51^{\circ} 32'$, but generally useful to *England*,
Scotland, and *Ireland*, &c.

With General and Monthly Predictions thereon.

To which is added the Time of High
Water at London-Bridge, both Morn-
ing and Afternoon; in an easie and ex-
act Manner.

Being the Third after Bissextile, or Leap-Year.

The like not extant in any other.

By **GEORGE PARKER**, *A Lover of
the Cælestial Sciences.*

TO THE READER.

Reader,

Finding my last Years Endeavours so generally accepted by many Persons that had the Perusal of it, especially Artists, hath given me new Life, and raised my active Mercury to the Composition of this: and, being not willing to be confin'd to a Scantling of Paper, have launched out to what you now see; and doubt not but this Years Essays will find as courteous Entertainment as my last did, here being an Addition of several things of Consequence. The Time of High Water at London-Bridge being a thing that many have complained of: Some, that they could not understand how to know it, others, that there was no truth in the times commonly given by the Almanacks; all which I have endeavoured to rectifie, having laid it down in a plain, easie, and familiar Method, wherein I have noted every Tide both Mornings and Afternoons. And that in an exact Manner, differing at some times near two Hours from the Times noted in our Common Kalendars. And thus much I dare say of it; that, except there be high Winds or great Floods, none shall ever miss of the true time, that have occasion to make use thereof.

But if any should be unsatisfied in this Method, I then recommend them to a Table annually published by Our English Tychio, That Excellent Astronomer Mr. John Flamsteed, who hath taken great Care and Observance of the Times of High Water for some Years past.

The next thing I shall acquaint you of, is, That I make use of the Caroline Tables in my Calculations, being still of Opinion they are the best extant; and not of our latest Authors, which some may wonder at: And therefore shall give some Reasons for it.

To the Reader.

In the first place, they are not a new and entire piece of Astronomy, as was pretended, but a Transcript of our Author's; the Tables in a manner intire the same; the Diagrams, Calculations, and Discourses exactly repeated in most part; the Remainder is generally from Mr. Wing: but I shall forbear, not being willing to dis-oblige any, only to manifest to the World I am not wedded to an Opinion: but shall make use of better when they appear. And also to shew my Respect to our deceased Author, who was my Friend.

As for Predictions of the Weather, it is a very nice and intricate Point to hit: England is but a little Spot in respect of the whole Universe; The Clouds are also driven by the Winds, and hard it is to say where they shall discharge themselves: Nay I have known, in some Counties of England, it hath been very rainy Weather, and in others at the same time dry: yet thus much I have to say, I came as near the Truth as any that wrote the last Year; if I should give you an Account how near my Meteorological Predictions happened, I should almost give you a Diary of what Weather we then had. I speak this to the Honour of Astrology, and also of the Merity of Heliocentrick Aspects, which I recommend all Lovers of Art to take notice of, which I do affirm to be very significant. And, if I live another Year, I shall demonstrate how they are formed, for the information of the young Student; in the mean while I remain,

Leopard in Newgate
Street; London,
Octob. 8. 1690.

Your Friend and Servant,

George Parker.

THE Introduction.

A Strology is an Excellent Science, but laborious, intricate, and full of difficulty; and therefore it behoves the Artist not to be too peremptory and positive in his Judgments but humbly to submit to the Will and Disposure of the Almighty, and beg his Assistance: for that God that hath made all, the Sun, Moon, and Stars, and placed them for Signs and for Seasons, can, at his Pleasure and good Will, contradict and dis-appoint all: and perhaps at some times may do it that no Flesh might glory in his sight.

“And *Ptolomy*, in the first of his *Centiloques*, observing so great a Variety of Matter, and the sundry Influences of so many and great Stars, thought it a hard and difficult thing to consider, throughly and exactly, the Cœlestial Mixture; saying, in his first *Aphorism*, *Abs te, & à te scientia, &c.* for it is impossible that a Man, though never so knowing, should distinguish the particular Form of things, and that he that treateth of these things must only conjecture, for none but such Persons as are inspired from above can foretell particulars. He further telleth us, that there is something Super-cœlestial that assisteth a Man in predicting future Events.

Then we may further consider, that in this part of the Art (*viz.* Mundane) how weak a Basis and Foundation we have to build and raise so large a Structure upon; I mean, as to the Sun's Entrance into any of the Cardinal Points) for if we miss of the Sun's true place but one minute, which the best of our Tables Astronomical, yet extant, will hardly pretend to; I say, if we miss but of this small matter in the Sun's place,
this

The INTRODUCTION.

this will be near half an hour's difference in time: and if Signs of short Ascension are on the Ascendant, where is the Verity of our Figure then?

But, suppose it be granted, that we have such true Tables Astronomical, and that nothing in that part be wanting, yet ~~all~~ that I have met withal, allow *Sol's* entering *Aries* to be no more than his return to his radical Place of the Creation. For which if we consult History about the time, in order to obtain a Radix, therein we are at a great loss; for the vast difference of Years, in the several Accounts of the World, carries us into a Labyrinth of Confusion, that we know not at what time, or where to begin to number from.

Now the Year is not so uncertain only, but the Time of the Year is as much questioned: some affirm it was at the *Spring*, when ☉ enters ♈, and bring these Reasons for it. For then every thing, as Trees, Plants, &c. begin to grow, bud and spring forth: so, others say, it was at the *Autumnal Quarter*, when ☉ enters ♏, and bring no less Reasons for it, affirming the same then begins to the World's *Southern* Inhabitants. Thus are we uncertain, not only of the Year, but also of the Time of the Year of the Creation: yet these things ought to be known and granted, before we proceed to give Judgment; for it is not sufficient to have a Figure of the Revolution to go by, but we ought to observe what Conjunctions, Transits, &c. the Planets make upon any of the Helygiacal Points of the Radix, as the *Asc. M. C.* place of the *Sun, Moon, &c.* I say, the want of a Radix to compare with a Revolution, and yet proceed to give Judgment without it, is unreasonable and absurd, as is very well known to the Ingenious Genethliacal Astrologer: therefore considering the want of these things, the Artist (as I said before) ought not to be too peremptory or positive in his Judgment, but cautious and wary in his Prognostications.

And yet I have heard of a Person that pretends to rectifie Astronomy from Astrology, by the Accidents that have happened in the World, and this to be deduced from the Positions of the Heavens at the *Vernal Ingress* of a Revolution, making

The INTRODUCTION.

making that to be the Basis that he would work upon. A *Herculean* Labour I assure you. And when he hath done it, 'tis to as much purpose as to affirm, that the *Sun* is in *Cancer*, when he really is in *Capricorn*; because there hath happened a warm Day.

But what then, is there nothing in all our *Vernal* Ingresses? Have all our Ancients been in the dark, and built their Annual Judgments on a meer Chimæra of their Brain, without any Foundation? I say not so neither; something there may be in it: for when ☉ toucheth the first point of ♈, he hath made his return to one of the chief Circles of the Sphere, in which Circle all Time is measured, and the Days and Nights are equal to all the Inhabitants of the Earth, and all Plants, Trees, &c. begin to fructifie and grow. The next point he cometh to, is ♊, where when he first toucheth, he hath made his greatest Perambulation *Northward*, to visit the Inhabitants under the *Northern Pole*: from thence he bendeth his journey towards the Equator again at the point ♋, making equal Days and Nights as before: and now the *Spring* begins with the Worlds *Southern* Inhabitants; the Birds singing, and other little Animals leaping for Joy that he is coming to make his abode with them. And from thence he devolveth to the point ♌, which is his farthest Bounds *Southward*, where when he arriveth, he maketh our shortest (but their longest) Day, and comforteth the chillified Inhabitants of that Place. And therefore I say, when the ☉ first toucheth any of these Points, it may not be altogether amiss to consider the Position of the Heavens at those times, in regard they are four grand Cardinal Points, far differing from all the rest in Virtue. For which Reasons I shall proceed to the erecting of Schemes to the aforesaid Times, and make some brief but modest Observations thereon. And if I hit not the White, in my Astrological Predictions, touching Mundane Affairs, let not the Ingenious impute it to the Insufficiency of the Artift, or Discrepancy of the Art is self, for the Reasons aforesaid.

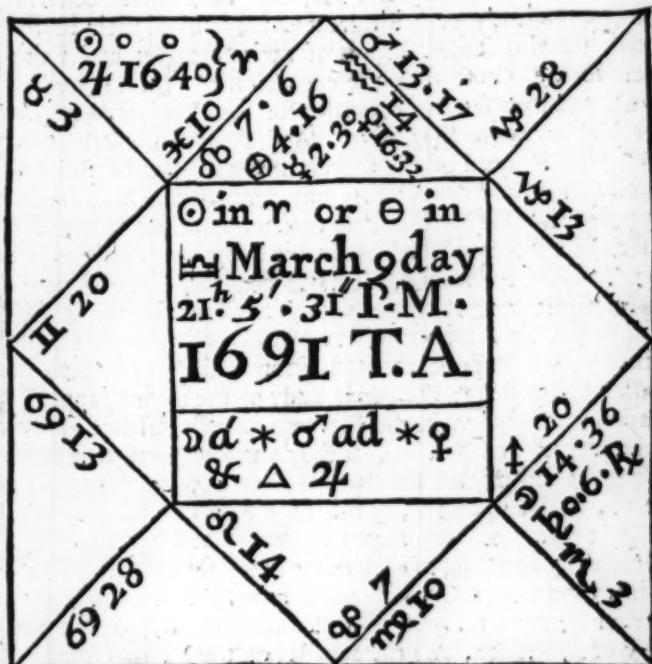

*Astrological Observations upon the Quarterly Ingresses
for the Year 1691.*

☉ in ♍ 1690. December 10. day, 19^h. 34^m. P.M.
M.C. ☿ 25. Asc. ♂ 21. ☽ à □ ♀ ad □ ♀.

♄ ♀ 26. ♃ ♀ 1. ♂ ♀ 7. ♀ ☿ 13. ♀ ♀ 18.
☽ ☿ 13. ⊕ ☿ 4.

I Have not room to insert the Figure, but those that have a mind to see it, may easily do it themselves, the Ascendant M.C. being as I have noted. This is no Time for Action either by Sea or Land. Now Fleets should be in their Harbours, and Soldiers in Garrison or other Winter-Quarters, for ♀, Lord of the Ninth, on the Cusp of the Ascendant, signifies Ships retired, home: and ♂ in the Twelfth shews the Soldiery to lie dormant, and yet so as to be soon ready for Action. The Moon is entering the Eighth House, and near her South Node, and separates from a Square of ♂, and applies to a Square of ♀, Lord of the Seventh and Ninth Houses, as before: this will give some small Skirmishes both by Sea and Land, such as the season will permit. The aforesaid Positions of ☽ and ♀ bring much unwelcome News to some Merchants, as Losses by Pyrates, and such like: yet others again are promised many happy and good Returns, as the Sextile of ♀ and ♀ import: ♀ Lady of the Tenth in the second, and in Sextile to ♀, as before is noted, will also make Money stirring among the Commonalty, giving a brisk Trade for the season, which will be very acceptable to the People, the Square of ☉ and ♃ produces some storms of Wind in the Elements, and Discontents among Persons of Quality: but it soon vanisheth, for ♄ casts his Trine to ♃, who, by his grave, sober and profound Council, allays those Heats of Choler and Passion, which being over, They wisely bethink themselves, it's better to agree like Friends, than differ about trivial Matters.

A Scheme of the Ingress of the Sun into the Equinoctial Sign Aries, from Astronomia Carolina.

[N the Scheme of this Ingress we have never a planet essentially dignified, only ♃, ♂, and ♀ are accidentally well posited, by being in the Tenth and Eleventh Houses, ♃ and ♂ are equal in Dignities and most potent; ♀ not much inferior in Power, and therefore will have a share in the Transactions of this Quarter. All the Planets, except ♄ and ♀, are above the Earth, which denotes an active, busie time in earnest, for some great matter or undertaking is now on foot. Yet much Action in War may not be expected in this Quarter.

ter, but rather a preparation thereunto: But as δ is posited on the Cusp of the Mid-Heaven, or Angle of Honour, in Sextile to χ in ν , and thereby his Disposer: which betokens the Souldiery not to be idle, but brisk and active, behaving themselves valiantly or with great Courage in all their Undertakings, shewing further Proofs of their Integrity and Faithfulness in the Cause they are engaged in; which is well received, and they suitably rewarded for such Performances, by their Master whom they serve. And as δ disposeth of ψ in ν , who is Lord of the Eleventh House, and he Ruler or Disposer of *Pars Fortuna*; this may denote some considerable Advantage to those Martialists to enrich themselves by Plunder, or such like Booty; which *Mars* his being in Sextile to the *Moon*, Lady of the second, seems to confirm. The \odot is the general significator of Kings, who is well placed in the Eleventh House, in Trine to *Saturn*; and *Venus*, by being posited in the Tenth, bespeaks the Condition of such Persons to be good and flourishing: the *Moon*, Lady of the second, applying to a Trine of *Jupiter* in the Eleventh, adds substance to the Exchequer of Princes, so that they know no want to manage those great and mighty Enterprizes they now are engaged in. The \odot , as I said before, at this Ingress, is immediately saluted by a Trine of *Saturn* from *Sagittary*, and in regard both are mutually applying to each other, may signifie some extraordinary and serious Counsels to be now held or in agitation, wherein several Overtures of Peace may be offered and had under consideration, also the Sextile of the *Fortunes* from the Tenth and Eleventh Houses, may incline the Minds of Kings and Princes thereunto. But *Saturn* is Retrograde, and soon falls into that false and perfidious sign *Scorpio*, and is also beheld of *Mercury*, who is in his Detriment and Fall, with a square Aspect Geocentrick, and is but newly separated from a Conjunction of him Heliocentrick; This, I fear, may hinder such Blessings from taking effect in the World; and that instead thereof, or under that Notion, many delusive Designs may be acted, corrupting of Counsels, much Fraud and Dissimulation may be perpetrated by such like specious Pretences.

Astrological Observations, 1691.

On the Cusp of the Ascendant is *Gemini*, the Ascendant of London, and *Mercury* Lord thereof, as I noted before, being in his Detriment and Fall in *Pisces*, and there in square of *Saturn* in the Sixth who is Lord of the Eighth: this betokens much Sicknes and Infirmities to afflict the Inhabitants of that Place; and indeed the whole Kingdom in general, with Colds, Gouts, Consumptions, *Quartan Agues*, Grief, Frights, and such Diseases as proceed from Melancholy; the Moon is also in the Sixth in Opposition to the Cusp of the Ascendant, which betokens as much. — The Conjunction of *Mars* and *Venus* in the Humane Sign *Aquarius*, inclines many to lustful and licentious Courses. And *Mars* having Exaltation in the Eighth House, may give, by their too much sporting in the shades of *Venus*, some Venereal Contagion that they may not very easily get rid of. *Saturn* is Lord of the Ninth and Tenth Houses; Perigrine and Cadent in the Sixth, and there in square of *Mercury*: this betokens the Merchants to have but bad Returns in their Adventures; and that many Losses may attend them by Ships leaking, foundring, or sinking into the Sea. Neither are the Commonalty exempted, but are often disturbed with Fears and Jealousies, and a great Complaint amongst them of a dull Trade during this Quarter.

☉ in ♊ June 10 day, 22^h 30^m P. M.

M. C. ♀ 9° Asc. ♃ 14° ☾ á ♂ ♂ ad * ☉.

♂ ♀ 24. 34. ♃ 7. 45. ♂ ♀ 23. 14. ♀ ♂ 23. 9. ♀ ☉
14. 50. ♃ ♀ 28. 33. ☉ ♀ 12. 30.

AT this *Solstitial Ingress*, we have six of the Planets above the Earth, which was also remarkable in the *Vernal Ingress*. Many notable Projects are now acted, and shew themselves to the World; many Martial Designs are now on foot, for *Mars* is in his domal Dignities in Conjunction with the *Moon*, which is of mischievous signification. Let's hear the opinion of *Haly* upon it, That, if there be a Conjunction of *Mars* and *Luna*, at any Revolution of the *Sun* or *Solar Ingress*, *Significat Rumes*

falsos, & Sanguinum Effusiones, & Mendacia multa, &c. It signifies many false Reports, much Lying, and great Effusion of Blood. And if *Haly* were of that opinion meerly by their Conjunction, what shall we say to have them conjoined in the Eighth House, which by all Astrologers is accounted inimical to Mankind, viz. the House of Death: from which Position we may rationally expect to hear of great Fights, much Slaughters, Burning of Towns, and such like Devastations, where Armies are near one another: for *Mars* is in *Aries* a fiery Sign and swift in Motion.

Saturn hath made his return to *Scorpio* again, and hath took full possession thereof, making a tedious and an unusual Transite therein: Ah *Ireland*! thou hast felt the Effects of his opposing thy Horoscope a long time; and yet he is returned thither again, as if thou must have a longer taste of his sower Dregs; but the mellifluous *Venus* hath enter'd her Castle, and makes up to oppose him with a full Career thinking to reverberate his angry Atoms; who by her sweet Influences would heal the bleeding Wounds of those Kingdoms under her benevolent Tuition. The *Moon* also ascends her Throne in a short time, and sends her friendly *Sextile* to the *Sun* for Aid, and resolves to try her Abilities against so potent an Adversary, but all in vain; the old Gentleman is but slow of foot, and he'll not mend his pace, to please any of them all; and where he treads he makes an Impression.

But now to the Tenth House, where the *Sun* is posited Angular, in *Sextile* to the *Moon*, who is the general Significator of the Commonalty: this denotes Kings and Princes to be in great and flourishing Conditions, and that those People whom they govern shall readily and chearfully obey them in all their Commands, every one striving with his equal to shew most Duty, Loyalty, and Affection towards their Sovereign.

Astrological Observations, 1691.

☉ in ♌ 1691. Sept. 12. day, 12^b. 2'. 56'', P. M.
M. C. ♊. 1. Asc. ☿. 27. ☽ ad Δ ☿.

♄ 26. 2. ♋ 15. 20. ♌. ☿ II 19. 58. ♀ 16. 14.
♀ ♌ 24. 3. ☽ ♌ 12. 53. ⊕ ♌ 9. 53.

THE Planets are in a calm and serene Posture, the Fortunes in Trine to each other from good Houses of the Heavens; the *Moon* and *Mercury* are Angular, and in Trine to *Mars*, the *Sun* is likewise in Sextile of *Saturn*: From all these friendly Positions it may be reasonably hoped that the Minds and Passions of Men are somewhat allayed, and those Heats of Choler much abated. Now in the two last Quarterly Ingresses most of the Planets were above the Earth, and betokened great Matters on the stage of the World; so now we find five of them under the Earth, which denotes the Actors now to be retired; and that it is a Season more for Consultation than Action. Having thus given you an Account of the Ingresses into the Cardinal Points, I shall desist at present and refer you to the Observations I have made on every Month, for more particular Information.

The Inclinations, or Angles which the Orbits of each Planet makes with the Ecliptick or Orbit of the Earth.

	d.	m.	sec.

♊	6.	54.	0.
☽	5.	0.	0.

Of the Eclipses of this Year 1691.

There can be but two Eclipses this Year, and both of them of the Sun; neither of them will be perceived in England, or any part of Europe: But the general Calculation of them was given me by a Friend, as follows.

The first Eclipse is February 18. in the Morning; the total Shadow enters on the Earth's Disk, about the middle of the East-Coast of *Madagascar*; and thence moves Eastward along the Parallel of 20° South, for a considerable space; in the mean time the Sun rising more or less Eclipsed all along the East-shore of *Africa*, almost to the Cape of *Good Hope*. Then the Total Shadow having traversed the *Indian Ocean*, crosses the South End of *Sumatra*, and about *Borneo* is total in the Meridian; whence tending into the North-East, leaving *China* and *Japan* on the left hand, it passes off the Earth about 15° to the East of *Japan*. In the mean time the partial Eclipse spreads over the Southern Parts of *India*, *Bengall*, *Siam*, *China*, *Japan*, and all the *Indian Islands*; to all which Places it will be more or less visible.

The other Eclipse is August 13. in the Afternoon; the total Shadow enters on the Earth beyond *California*, in the Latitude of 18° North. And from thence moving Eastwards and Southwards withal, passes all along the Coast of *New Spain* and *Mexico*; where the Eclipse will be great; thence passing on more southerly, the Total Eclipse crosses the *Equinoctial*, near the Meridian of *Jamaica*, and from thence traverses all the *South-America*, and leaves it about the South-Coast of *Brazil*; the partial shadow over-spreading all the *Magellanica*, and reaching to the *Charibbe-Isles*.

Lastly, The shadow passes off in the *Ethiopic Ocean*, in the South-Latitude of 33° and 14 grad. West from London, and the same may be observed to let more or less Eclipsed all over the West Part of that Ocean, between *Brazil* and the Meridian of *Santa Helena*.

I had

I had Thoughts of presenting you with the Observation of the Lunar Eclipse that happened in *March* the last Year, as it was observed by the Famous Mr. *Flamsteed*, at Their Majesties Observatory at *Greenwich*. But not fully having his leave for so doing, I desist, only assuring you that the *Caroline Tables* came much nearer the Truth than either *Astronomia Britannica*, or *Anglicana*.

Examples of the Use of the two last preceding Tables.

(1) *For the Time of High Water.*

THE 10th. of *January* this Year I would know when it be High Water at *Rochester* or *Malden*. In the first Table under *January* against the 10th. day, I find the *Moon* is South at 4^h 49^m Morning, then in the last Table, against *Rochester*, *Malden*, &c. I find 0^h 45^m, which, according to the Title, added to 4^h 49^m. the time of the *Moon*'s southing, makes 5^h 34^m in the Morning, which is the Time of High Water in all those Places. The like Method use in any of the rest.

(2) *To know the Hour and Minute of the Night by Moonshine on a SUN-DIAL.*

The 30th. of *January* this Year, I find the *Moon*'s Southing in the former Table 9^h 5^m Afternoon: And admit I see her Shadow upon a Sun-Dial just upon 11. of the Clock, that is 1. hour before her coming to South; therefore from 9^h 5^m subtract 1 hour, and there remains 8^h 5^m the Time of the Night desired. But if the *Moon*'s shadow had been on 2 hours of the Afternoon-side of the Dial, then I must have added 2 hours to her southing, and then it is 11^h 5^m the Time of the Night the said 30th. of *January*.

Note, That if the said Shadow fall precisely on the hour of 12, then the time of *Moon*'s southing is the exact time of the Night.

But to find the Time of the Night more exactly, do thus;

1. If the Shadow falleth on any Time Afore-noon of the Dial, subtract that time from 12 hours, and keep the Remainder. Also subtract the next aforegoing given southing from that of the present Night, in which you observe the shadow, noting the difference.

Then say by proportion, as 24 hours are to the last found difference, so is the first-found remainder to the proportional minutes, which minutes added to the first-found remainder, and the sum subtracted from the southing of the present Night, there will remain the true time of the same Night.

2 If the Shadow falleth on any time Afternoon of the Dial, subtract the given southing of the present Night, from that which next followeth, taking the Remainder. The

Then say, as 24 hours is to the said Remainder, so is the time by the shadow, to the proportional minutes, which, together with the time by the shadow, added to the southing of the present Night, the sum is the just time of the same Night.

EXAMPLES.

Admit, that *February* the first, at Night, the *Moon* do cast her shadow upon 8 hours Afore-noon, which subtracted from 12 Hours, the Remainder is 4^h 0^m.

The *Moon's* southing in the same Night is at 11^h 10^m, and the afore-going southing at 10^h 9^m, which subtracted from 11^h 10^m, the Remainder is 1^h 1^m or 61. minutes.

Therefore I say, as 24 hours is to 61 min. so is 4 hours to 10 minutes.

Then the sum of 4. h. 10. m. subtracted from 11. h. 10. m. there will remain 7. h. 0. m. which is the true time of the Night.

II. Suppose that in the above-mentioned Night, the shadow falleth on 3. b. 15. m. after-noon, the southing for the present Night is at 11. b. 10. m. and the Night following at 12. b. 9. m. the difference is 59. m.

Therefore as 24. h. is to 59. m. so is 3. b. 15. m. to 8. m. *feré*.

Which 8. m. and 3. h. 15. m. and the Time of the *Moon's* southing being all added together, gives the true time of the Night to be 2^h 33^m past Midnight, or the next Morning.

The Use of the following Table.

THE following Table is easie to be understood, for knowing the Price of 1 Pound of any thing, which look for under the Title of 1 Pound-weight, and in the next Column to the right Hand, even with it, is the Price by the Hundred-weight.

This Table goeth but to 24 pence or 2 shillings a Pound, yet it may be made useful further, thus: Let the sum be 2s. 6d. a Pound, to know what the Hundred-weight is at the same Price. Two shillings a pound is 11 l. 4 s. the Hundred, and 6 d. a pound is 2 l. 16 s. a Hundred, therefore add 11 l. 4 s. and 2 l. 16 s. together, the sum is 14 l. 0 s. which was required.

A Table, whereby knowing the Price of the Pound, you may know the Price of the Hundred weight: which the Author hereof presents to the use of all Cutlers: And may serve for several other Trades.

OBSERVATIONS.

THE Year begins with a pleasing, smooth Face; all things look with a calm and serene countenance for a while; which God of his infinite mercy continue. The * of ☉ and ♃ from ☿ and ♀, seems to confer some Honour or Preferment on some person or persons of the long Robe; But the Envy of some spirits ariseth to reproach and scandalize them, but it soon vanisheth and they are ashamed of their Actions.

On the 30th. of this Month, 1648. King Charles I. of ever Blessed memory, was, by his own Subjects, **[A Pest of Religious Cut-throats]** Murdered before his own Palace Gate at *White-Hall*.

He was Interr'd at *Windfor* in a Coffin of Lead, and a Loyal Gentleman standing by threw this Distich into the Vault with him.

Non Carolus Magnus, nec Carolus Quintus,
Sed Carolus Agnus, hic jacet intus.

Not Charles the Great, nor Charles the Fifth
lies here,
But Charles the Lamb! A Prince without a
Peer. *Gads. Coll.*

OBSERVATIONS.

THE many Heliocentrick Aspects of the Planets in the latter End of the last Month seemeth to betoken an active-busie Time. Great Consultations and Counsels seem to be held in the latter end of the last month or beginning of this, which we hope may tend to the settling of Peace and Unity among us: And also to the advancing the Grandeur of this our Nation of Great Britain.

The Heliocentrick Opposition of *Mars* and *Mercury* denoteth an Infection of the High-ways by Thieves and Robbers, but we hope many of them are taken and brought to Justice; for *Mercury* soon falls Retrograde and becomes combust in the Sign *Pisces*, where he is in his detriment and fall. And then cometh to a Square of *Saturn* Geocentrick, and square of *Mars* Heliocentrick, which farther bodes that many Mercurialists are in a troubled Condition, that they shall be subject not only to Rebukes and Reproofs, for their misdeeds, but to the Loss of their Places also.

Month: Days:

OBSERVATIONS:

Some scandalous and malicious Pamphlets are promoted by angry active Pens. *Jupiter* in *Aries* the Horoscope of *England*, in *Sextile* with *Venus* from the humane Sign *Aquary*, raiseth the active Genius of Our Nation to their former Courage and Magnanimity, to the Fear and Terrour of its Enemies. *Saturn* hath no sooner left *Scorpio*, but, by a Retrograde motion, returneth thither again, opposing the Ascend. of *Ireland*, as if the Troubles and Commotion of that Kingdom were not yet over; but began again to bleed afresh. But we hope that the Victorious Arms of Our most Gracious Sovereign King *WILLIAM* will soon make them sensible of their Ingratitude, and make them know that an humble Submission would have been far more to their Advantage; which they may have Cause to repent of when it is too late.

OBSERVATIONS.

THE Heliocentrick Conjunction of
Saturn and *Venus*, in the latter End
of the last Month, *Significat quod accider*
hominibus corruptio Amoris; signifies that
there shall happen a Corruption in Love-
amongst mankind. And the Square of the
Grand Infortunes *Saturn* and *Mars* from
that stigmatized sign *Scorpio*, and humane
sign *Aquary*, by mutual Reception, signifies
both are agreed for mischief obstinate and
lasting, now, or nearly ready to break forth
amongst mankind. Let *Tartaria*, *Bavaria*,
and the *German*, *Russian* and *Ottoman* Em-
pires tell us the meaning of it, with some
other Places nearer home.

Much News arrives from several places,
which is not unwelcome to the Commonal-
ty of our Nation of *England*, also our
Merchants Ships return safe from several
Parts, with rich Lading, thereby comfort-
ing and rejoicing the drooping Spirits of
those that have formerly been great
Loosers.

OBSERVATIONS.

BEfore *Jupiter* leaves *Aries*, *England's* Ascendant, the benign Planet *Venus* takes possession thereof, which is also seconded by the warlike Planet *Mars*; this gives His Majesty of *Great Britain's* Arms Success and Advantage against his Enemies, making them prosperous in their Undertakings. Also some brave Soldier or Commander is advanced for his gallant and heroic Actions.

The *Sun* casts a *Sextile* to *Mars* from *Gemini*, a Humane sign, and the worthy Magistrate (who bears not the sword in vain) is careful that neither natural nor moral mischiefs get ground.

The Conjunction of *Jupiter* and *Venus*, in the fixed sign *Taurus*, with other Configurations, bodes Respect and Reverence to the pious Clergy.

The *Astronomical Reader* is desired to take notice that where-ever he finds any Planet is noted in ♂ or ♀, it is not to be understood *Dragon's Head* or *Tail*, but in their own North or South Nodes.

Month Days.

OBSERVATIONS.

Various and lying Reports spread in this month, to amuse the People, for *Mercury* is Retrograde, and in Heliocentrick Conjunction with *Saturn*, and then applies to the Square of *Mars* Geocentrick, an apt signification for such Mischiefs; for which the Authors are rewarded (we hope) according to their Merits.

The Opposition of *Saturn* and *Venus* doth not only make an Alteration in the Air, but discomposes some Females, which is further confirmed by the Square of the *Earth* and *Venus* soon succeeding.

On the 8th. of this Month, 1688, these faithful Patriots of the Protestant Religion, viz. *William* Lord Archb. of *Cant.* *William* Lord Bp. of *St. Asaph*, *Francis* Lord Bp. of *Ely*, *John* Lord Bp. of *Chichester*, *Tho.* Lord Bp. of *Bath and Wells*, *Tho.* Lord Bp. of *Peterborow*, *Jonath.* Lord Bp. of *Bristol*, were sent to the Tower, for withstanding Popery and Arbitrary Power, And tryed on *St. Peter's* Day following.

Observe the Lessons and Prayers
of the Church for both Days.

OBSERVATIONS.

GOD Direct the Affairs of Their Ma-
jesties of Great Britain, Prosper Their
Most Honourable Privy Councillors, in all
Affairs of Government; and Intimate Their
Enemies: God grant Their Majesties the
Wisdom of *Salomon*, and the Fortitude of
David. The Stars denote some more than
Ordinary Matter or Action now or nearly
ready to be ushered into the World—

Mars is now got into the Bull, where he makes ruffling doings, and by his quick Motion soon joins *Jove* in the same Sign. Some pious Cheat or fraudulent Action under specious Pretences, is hereby designed in some Part of the World or other; perhaps, *Ireland, Lorraine, Poland, Russia, &c.* may best tell the Effects of it; — It also happens in Opposition to the Ascendant of a certain Great *Monarch*, which may Disturb his Greatness. —

250	165	3027	13	14	15	16	17

The image is a dark, high-contrast, black and white photograph. It features a grid-like pattern, possibly a window or a screen, with a vertical strip of text on the left side. The text is partially legible and appears to be "MAY 1951". The overall image is very dark and grainy, with a high level of contrast.

THE Affairs that happen in the latter part of the last Month; as the Opposition of *Serena* and *Mars*, and the Square of the *Sun* and *Jupiter* with certainly three in *Effects* in this: It signifies Great Wars, Fights and Duels, obdurate and daring Actions both by Sea and Land, managed and perpetuated with much Ambitiveness and Malice, Spite and Anger. Pray God bless the Protestant Interest in *Ireland*, the Temples of that Kingdom we fear, are not yet over, *Norway*, *Sweden*, *Polonia* and *Russia*, are not exempted.

On the 17th. of this Month 1689, that Excellent *Affirmation* of the English Name, Mr. Thomas Street dyed, in the 69th. Year of his Age: and lies buried at Westminster New Chapel. And, if his Friends were willing to be at the Charge of a Stone, defend this might be his Epitaph.

There lies the Earth of one that thought some good
 although too few him rightly understood.
 Above the Stars his bright red mind did fly,
 His happier Spirit into Externity.

The Heliocentrick
Aspects.

Month
Day

OBSERVATIONS.

There is no Considerable Aspects of the Planets in this Month for to Disturb us, but rather a Tendency towards Peace, and accomodation. The *Serail* of the Sun and Saturn, inclines the Grandees of Nations into serious Consultations, and many deliberate Counsels are now held in Order thereunto; Mercury also, from the Sign of Justice, sends his friendly *Trine* to Mars in Gemini both human Signs. The Souldier after many brisk Rencounters and many other Martial Projects, begins to be more moderate in his Actions, and willing to take a little repose, being tyred with the Fatigues and Stratagems of War. Thus the Heavenly Bodies in this month, seem to incline the dispositions of men. God in his mercy, grant, That all Offers or Terms of Reconciliation and Peace, may take Effect; that the Destroying Angel may put up his Sword, and say it is enough; and that the Earth may enjoy her Sabbath again.

OBSERVATIONS.

Some Eminent Souldier or Commander receives the smiles of his Prince, or is preferred to some Honourable Place or Dignity for his faithful Services performed. May it excite all others that have any Charge or Trust committed to them to perform the like. *Mercury* this month is become Retrograde, and so comes to a Conjunction of the *Sun* and *Earth* in the signs *Scorpio* and *Taurus*, and then applies to a Conjunction of *Mars* & *Opposition* of *Saturn* Heliocentrickal. Many notable Projects, Devices, Designs, we fear Treacheries, are now on foot. Much Scribbling, Lying, and Printing base and seditious Pamphlets are dispersed abroad to amuse the Vulgar, and raise Commotions. — But what makes Retrograde *Jupiter* oppose *Sol*; the Rabbybusies of the Age are contriving how to Censure, if not Oppose the Actions of their Superiours, which we hope the careful Magistrate will endeavour to suppress: And let such giddy Zealots know, that they who dare to Contemn and Confront Authority, will meet with severe Reproof, if not Destruction or Deprivation of the Felicities they possess.

Aspects.

Month-Day

OBSERVATIONS.

Mars is now become Retrograde in Gemini, wherein he hath been since August, and continues his tedious Transit therein seven Months, viz. till March next. Denotes trouble to a great City in Europe, & Irritates her Sons of discontent to unreasonable Oppositions in their most serious Debates: the effects of this might perhaps begin to Operate in the two last Months about choosing of New Officers, or in what ever else they might then or now be concerned in, &c. — Bad News to several Merchants, many of them break & are made Bankrupts against their wills. God preserve us from fraudulent Actions and casual Fires, or other malicious Contrivances that tend to the Disturbances of the common Tranquillity — for such we say, is to be feared during ♂ abode in the sign II.

The Conjunction of Saturn & Venus Heliocent. and Geocentrical, gives discontent to some Eminent Lady, or submits to Death it self. Perhaps the Death of some Illustrious Person of the Female Sex in Spain, Hungary, Moravia, or in some other Places under the Sign Sagittary.

The Heliocentrick
Aspects.

Month Days.

OBSERVATIONS.

THE malevolent Configurations of the Planets in the last month, the Effects of which, are not yet over. And now this is usher'd in with an *Opposition* of the *Sun* and *Mars*; and an *Opposition* of *Mars* and *Mercury*, Some notable Designs and Contrivances are now Discovered, and their Villanies Detected; Coimers of Counterfeit Monies and such as deal in base Metals are brought to condign Punishment. The Highways are not free from Thieves and Robbers, but many of them are Apprehended and Delivered into the Hands of ☉ or the Magistrate who deals with them according to their merits. —

Some Eminent Person or Persons of the Long Robe Preferred and Advanced to Honour for their Ingenuity: For all which;

To the Eternal Trine, That One in Three;
That Made, Moves, Rules this All; All Glory

WHereas *Gustavus Parker*, late of *Sutton* in *Essex*, having removed his Habitation, and the Author hercof, being desirous to hold Communication with him by Letter or otherwise, doth therefore request, if any of these come to his hand, to be so kind, as to let him hear from him.

ADVERTISEMENT S.

WHereas several persons have requested the Author here-
of to Compose *Ephemerides* for several Years to come :
Of which he having considered, and being willing to gratifie
the Ingenious, doth therefore propose, by way of Subscription,
That he will Calculate *Ephemerides* for Seven Years compleat,
(*ab Astronomia Carolina*) with the Eclipses, Tables of Houses, and
other Requisites proper for such Work, which every Subscriber
shall have in Sheets at 5 s. 6 d. per Book ; nothing to be requir-
ed till the Book be ready for the Press, and then half; the
other part to be paid at the delivery of the Book. All Gentle-
men, and others, that are pleased to Incourage so Elaborate and
Useful a Work, are requested to send their Names and Places
of Abode to the Author, as is directed at the end of the Preface,
and it will come safe to hand.
